

# Aptem Checkpoint

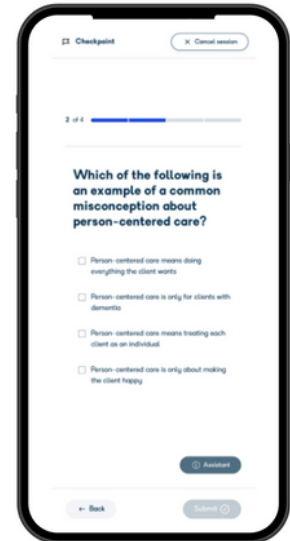

## An objective indicator of learner progress

**aptem.**  
Intelligent technology®

### Introducing Aptem Checkpoint

Aptem Checkpoint independently checks a learner's understanding throughout their apprenticeship, evidencing progress and acting as a supportive tool to successful programme completion.

Take advantage of in-system, AI-powered technology to consistently enrich the learning experience, giving your tutors the freedom to concentrate on where they can add most value.

### The challenges Aptem Checkpoint addresses:

#### **Inconsistent and subjective reporting of starting points and learner progress**

Aptem Checkpoint delivers an objective and comparable view of learner progress across all learners, including capturing accurate starting points.

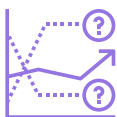

#### **High learner dropout or out-of-funding, due to progress issues**

Response inaccuracy or low engagement with Checkpoint acts as early identification of struggling learners, providing the opportunity to take corrective action.

#### **Inability to identify trends and improve quality of learning delivery**

Reports on trends across tutors, cohorts and employer types reveal ways to enhance teaching quality and better distribute resource to offer support where it's needed most.

#### **Inaccurate learner revenue forecasts and end-dates**

Objective progress indicators help providers make more accurate forecasts of end-dates and learner revenues.

#### **Time-poor tutors with high caseloads needing to focus support**

By identifying those learners who are not progressing as expected, and those who are, Aptem Checkpoint helps to direct tutors to areas of most need.

# Aptem Checkpoint

## An objective indicator of learner progress

### How does it work?

Aptem Checkpoint is the first of Aptem's AI-powered extensions to Aptem Apprentice, designed to replace high-effort admin tasks with faster, cheaper, high-quality technology solutions.

1

Aptem Checkpoint automatically generates a series of questions mapped to IfATE KSBDs, across all apprenticeship programmes, to monitor learner comprehension and identify areas for further study.

2

Answering these questions successfully provides an accurate indicator of learner success at EPA.

3

Lack of engagement with these Checkpoints, or poor scores, provides an early indicator that intervention is required to keep the learner on track.

4

This flexible feature can be used during onboarding to assess starting points, throughout a learner journey to assess progress, and pre-Gateway to assess preparedness for EPA.

5

Dashboards will show distance travelled and progress over time. You can drill down for detail, or extract the data from Aptem into your reporting tools.

### Interested in this new Aptem functionality?

To find out more or book your Aptem Checkpoint demonstration, please contact your Customer Success Manager or email [enquiries@aptem.co.uk](mailto:enquiries@aptem.co.uk).
